M.Sc. Cyber Security graduate and IT Support Engineer at SIXT SE with hands-on identity investigation, CISO-approved Windows hardening and security labs. Seeking a junior security role focused on practical security analysis, structured incident investigation and clear risk communication, while prioritising competing requests under pressure and continuing to learn.

CORE COMPETENCIES

Security analysis: Sign-in/log review, vulnerability assessment, root-cause investigation, risk identification and documentation.
Systems & tools: Entra ID, Intune, Active Directory, Autopilot, BitLocker, AppLocker, OpenVAS, Netcat, pfSense, Snort, ELK/Kibana.
Scripting & labs: PowerShell, Python/Flask, Bash fundamentals, Ubuntu, Proxmox, Docker, GNS3; TCP/IP, DNS, VPN.
Controls & operations: CIS/NIST/ISO 27001 mapping, ServiceNow/Jira; risk documentation and impact-based prioritisation.

PROJECTS & EXPERIENCE

Windows 11 CCTV Workstation Hardening — UniFi Protect
- Hardened a workstation with BitLocker TPM+PIN, least privilege, AppLocker allowlisting, USB/kiosk restrictions, firewall rules and audit logging.
- Created a reusable LGPO/secedit baseline and validation guidance; delivered a CISO-reviewed and approved report mapping controls to CIS Windows 11, NIST SP 800-53, ISO 27001 and ACSC Essential Eight.

Network Segmentation & IDS Analysis — GNS3, Proxmox, pfSense, Snort, ELK
- Built separate GNS3 and Proxmox labs; configured pfSense firewall rules and segmentation, analysed ELK/Kibana logs and validated Snort alerts to relate observed events to network behaviour.

ICS/OT Incident Prioritisation — Master's Thesis
- Built a simulated ICS lab using Python/Flask, OpenPLC, Modbus/TCP, MQTT, Node-RED, InfluxDB and Grafana.
- Evaluated **four controlled scenarios**, combining severity, architectural layer, asset criticality and operational context to produce explainable priorities for human response; documented prototype limitations.

AI Edge Device Preparation — NVIDIA Jetson Orin NX
- Completed Ubuntu/JetPack preparation, recovery assessment, setup checks and GPU/application validation; documented handover.
- Planned hardening: least-privilege accounts, restricted SSH, host firewall, compatible security updates and logging; validation and recovery documentation.

PROFESSIONAL EXPERIENCE

IT Support Engineer — *SIXT SE* Nov 2025 – Present
- Balance endpoint, identity and access incidents in ServiceNow/Jira; prioritise impact and urgency, maintain clear records and keep users informed while coordinating specialist escalation.
- Investigated unsolicited MFA activity: reviewed sign-in evidence, changed an affected authentication method and escalated findings to Security.
- Traced a privileged-access issue to a missing Entra Joined Device Local Administrator entitlement; guided the required request through One Identity.
- Investigate compliance failures involving deployment, synchronisation and security agents; document remediation needs and support secure Intune/Autopilot provisioning.
- Built PowerShell/read-only SNMP reports; identified weak credentials, legacy services and network exposure, documenting risks for review.

IT Support Engineer (Working Student) — *BayWa r.e.* Jan 2025 – Oct 2025
- Delivered L1/L2 support for **150+ users** across Windows, macOS and Microsoft 365; balanced requests using Intune, Active Directory and Windows 365.
- Supported onboarding/offboarding, device provisioning and endpoint security, developing practical understanding of access and infrastructure controls.

Cyber Security Intern — *Centre for Cyber Security Research and Studies* Sep 2024 – Nov 2024
- Performed vulnerability assessments using OpenVAS and Netcat; developed incident-response documentation for phishing simulations.

EDUCATION

M.Sc. Cyber Security — HDBW, Munich 2024 – 2026
Completed Aug 2026 | Overall grade: 2.03 | Thesis: 1.3 | Defence: 1.0
Bachelor of Computer Applications — Bengaluru North University 2020 – 2023
Bengaluru, India | GPA: 8.60

CERTIFICATIONS & TRAINING

Microsoft MTA: Networking Fundamentals (2021); Python for Cyber Security Professionals (2024);
Postman API Fundamentals Student Expert (2024); Introduction into Cyber Security and Networking Basics (2023).
